

PRIVACY FENCES

Since 1980, Everlasting Fence Company has been providing customers with the best products in the industry and a level of service matched by none. Through intense product research and annual training, our salesman and installation teams can help you accomplish your fencing and overall outdoor design goals. As Robert Frost said, good fences make good neighbors and that is exactly what our privacy fences do. With options ranging from Spruce stockade to basic cedar solid fences, or a semi-private shadowbox style, there is something to suit your needs. Stockade has a rounded front picket and comes manufactured from Canada, but it is a great way to get privacy at value pricing. We built our solidboard and shadowbox panels to your design, so attaining the privacy you desire, does not need to look like a wall. With a multitude of adornments available, these fences can be personalized to make your home reflect you. Built with Western Red Cedar 1"x4" or 1"x6" lumber, or Pressure Treated if preferred, mounted to Western Red Cedar 2" x 3" rails, 2" x 4" for Pressure Treated fences, these panels will last for years.

Wood: Western Red Cedar (WRC) or Pressure Treated (PT)

Spacing: Solidboard against board or Shadowbox

Pickets: 1" x 4" (actual 3/4" x 3 1/2") or 1" x 6" (actual 3/4" x 5 1/2")

Rails: WRC 2" x 3" or PT 2" x 4"

Heights: 36", 42", 48", 60", 72" or 96"

Pool Code: 48" high and up (shadowbox requires a tighter space between boards)
54" high and up in standard spaced shadowbox

Posts: PT 4" x 4" (actual 3 1/2" x 3 1/2") are standard, with options for 5" x 5" or 6" x 6"

*Above represents standard dimensions, but all fences can be customized.

Stockade: We use a Premium #1 Spruce Stockade, which consists of 1x3 pickets with rounded front on spruce 2" x 3" backing rails. These panels are pre-fabricated and cannot be modified much.

EXTENDED RAIL

The pickets are between the posts and extended backers are screwed to the back of the post. Commonly used with topped posts.

STANDARD RAIL

The panels are screwed to the face of the post. Commonly used with a flat top post.

BETWEEN THE POSTS

The panel is installed between the posts and fastened with screws. Commonly used with framed panels and capped or topped panels.

ON PIPE

The panels are installed on steel pipe set in concrete footers and fastened with wood adapters. Used when extra stability is needed.
